

The Voice of Military Communications and Computing

Military Information Technology

March 2009
Volume 13 | Issue 2

Cover and In-Depth Interview with:

Brigadier General Jeffrey W. Foley

Commander
U.S. Army Signal Center

FEATURED ARTICLES:

- **Broadband Satellites**

The Navy has begun procuring the next generation of commercial satellite communications terminals.

- **Early-Entry Comms**

The Joint Communications Support Element and industry are developing communications packages for "early entry" teams going into crisis spots.

- **Enterprise Finance**

The Army continues to expand implementation of the General Fund Enterprise Business System in order to improve financial, asset and real property management.

- **Access Control**

The Pentagon Force Protection Agency wants to make Common Access Cards the single identity credential for authenticating employees and as they enter federal buildings or other restricted areas.

- **Iraqi Networks**

The Multi-National Security Transition Command-Iraq is helping the Iraqi government's security agencies develop their own IT infrastructures.

- **SOA Lessons**

One of the architects of the Army's migration to a net-centric service-oriented architecture reflects on the challenges, solutions and implications for the warfighter.

Insertion Order Deadline: **March 4, 2009** • Ad Materials Deadline: **March 11, 2009**
